

Regional model validation record

Field	Entry
Region	[Region name identifier Regional workbook]
Catch source	[Provider; catch years; catch basis; date/version] [Region Catch files]
Selected article	[Authors (year). Title.] [DOI Paper PDF Paper folder]
Other known articles	[Author/year; short title; DOI or local record — one entry per article]
Selected model	[Exact model ID/name; period; domain; source groups] [Folder JSON Saved runtime, if relevant]
Other models from the same article	[Other model: period; area; distinguishing features — one entry per model]
Selection rationale	Article — [documented reason, or ?] Model — [documented reason, or ?]
Model extraction	[Source reconstruction report] [Material source conflicts; treatment Conflict report] [Diet sums: discrepancy and treatment, if relevant] [Missing/default GS; derived BA; other material changes]
SPPR calculation	[MANUAL — Researcher: calculation choices and reasons] [Excluded groups, scope and relevant values; other adjustments]

Field	Entry
GE diagnostics	[No negative SPPR entries across the basal-source columns; otherwise list each affected source and its groups by name/ID.] rho_living = [value]; b = [value]. Detritus [pool name/ID]: SPPR = [value].
TE diagnostics	[No negative SPPR entries across the basal-source columns; otherwise list each affected source and its groups by name/ID.] rho_living = [value]. Detritus [pool name/ID]: SPPR = [value].
Geographic fit	A. Region covered by study: [approximately, if applicable] [value or range]%. B. Study area covered by region: [approximately, if applicable] [value or range]%.
Temporal fit	[Model period; catch years; material implications of applying fixed coefficients or weights across years.]
Other	
Open issues and next action	[Researcher: open issues and next actions]
Review and reproducibility	Researcher name: [name] review date: [date]

Taxon mapping and coverage

Reference: [year and catch basis]; [source scope and taxon/group filters].

[n] source groups [+ synthetic imports separately]; [n] catch taxa.

Simple-chain PPR totals [value] t C in [year].

[If applicable: n taxa lack assigned TL/coefficient. Zero recorded catch gives zero PPR; positive catch with no coefficient has unknown PPR.]

Simple-chain PPR is calculated with [method name].

[\[Linked Excel taxon appendix and descriptive Sources sheet\]](#)

Overall confidence	Taxa	Catch percentage	PPR percentage
High	[n]	[%]	[%]
Medium	[n]	[%]	[%]
Low	[n]	[%]	[%]
Very low	[n]	[%]	[%]
Unresolved	[n]	[%]	[%]

The summary uses the weaker required membership or allocation confidence. The following tables show each component separately.

Group assignment rules

Plain-language rule	Confidence	PPR percentage
[Rules in descending PPR coverage; highest first]	[Level]	[%]
[Continue in descending order; include unresolved if used]	[Level]	[%]

[Add a Sum row only if the PPR percentages do not total 100%; otherwise omit it.]

Allocation weight rules

Plain-language rule	Confidence	PPR percentage
[Every actual allocation rule in full words]	[Level]	[%]
[Unresolved or not applicable where used]	[Level]	[%]

Each percentage is the simple-chain PPR associated with taxa using that rule. [Use known PPR only when unknown annual contributions remain.]

[Unresolved taxa: name each and give a short reason, or state none. Very low decisions: group by assumption, name the taxa or link exact appendix rows, and give their catch/PPR share. Scientific findings only; keep workflow and verification details in supporting records.]

Geographic evidence screenshots

Target region R and selected model study area S. [Overlap method and approximation, if applicable.]

Region area

Target region boundary
[Insert readable boundary image]

[Region name/ID; boundary source/version | Source | Image]

Study area in the article

Study boundary for the selected model
[Insert readable boundary image]
