

Northern Humboldt corrected-model taxon mappings

2019 landings; all 218 labels including zero catch; corrected Northern Humboldt 1995–1998 model
Descending independent simple-chain PPR; saved wet-weight SPPR multiplied by catch and divided by 9 once
? = unavailable TL, catch, PPR or weight. Missing classic coefficients only affect zero-catch labels in 2019.
Total landings (t) 7,166,264.97 Simple-chain PPR (t C) 277,099,551.43

Taxon name	TL	Catch (t)	Simple-chain PPR (t C)	Mapped group names and weights	Confidence level	Reason
Dosidicus gigas	4.14	702,378.49	107,728,023.63	Jumbo squid (100%)	High	Jumbo squid explicitly represents Dosidicus gigas in the inherited source definition; other cephalopods exclude this named compartment. One group receives 100%. Sources: Focal, FreshTaxonomy, Tam2008, Regional, SAU_methods, WoRMS.
Sarda chiliensis	4.49	91,711.36	31,490,576.27	Other large pelagic fish (100%)	High	The inherited definition explicitly lists this species among Other large pelagic fish; the list is not treated as exhaustive. One group receives 100%. Sources: Focal, FreshTaxonomy, Tam2008, Regional, SAU_methods, WoRMS.
Engraulis ringens	2.70	4,454,533.71	24,806,171.43	Anchovy (100%)	High	Anchovy explicitly represents Engraulis ringens; anchovy eggs are a separate nonfeeding pool and are excluded from landed fish. One group receives 100%. Sources: Focal, FreshTaxonomy, Tam2008, Regional, SAU_methods, WoRMS.
Merluccius peruanus	4.40	63,598.70	17,750,302.10	Small hake (97.5%); Medium hake (2.51%); Large hake (0%)	Medium	The source's Merluccius gayi peruanus is accepted as Merluccius peruanus by WoRMS. The union of all three hake size groups is eligible; printed boundary gaps and the unspecified length convention affect allocation, not this species identity. Allocation assumes fixed native group-landings proportions; zero candidates remain. Sources: Focal, FreshTaxonomy, Tam2008, Regional, SAU_methods, WoRMS, WoRMS_hake, IMARPE_hake2019, Native, FreshProxy, CompositionSearch.
Katsuwonus pelamis	4.43	53,578.41	16,023,127.96	Other large pelagic fish (100%)	Medium	This tuna, bonito or mackerel lineage extends the source's named Sarda/Thunnus representatives in Other large pelagic fish. Scomber japonicus has a species-specific compartment; it does not contain these different taxa. No source numerical size cutoff is assumed. One group receives 100%. Sources: Focal, FreshTaxonomy, Tam2008, Regional, SAU_methods, WoRMS.
